

Recycling

- Procedure compliant with legal requirements
- Environmental protection
- Waste recycling
- Sealed waste recovery containers

WHO IS RESPONSIBLE FOR WASTE?

Industrial companies with activities that generate waste are legally responsible for that waste, and must make the necessary provision for disposing of it. Métaconcept is aware of the problems that this can cause businesses, and has set up a system to collect white metal, recycling or disposing of it in accordance with current statutory requirements.

ENVIRONMENTAL INFORMATION

Recovering scrap metal with a view to reprocessing it is the ideal solution for all companies in the metalworking industry. This approach protects the environment more effectively. Although this awareness of environmental issues is quite recent, solutions to these problems already exist and are in use today.

Métaconcept has considerable experience in the field of collecting scrap metal and has perfected a fast, efficient recycling service to meet the needs of the modern industrial world.

Métaconcept processes scrap metal of many different origins:

- Oxides skimmed from molten metal baths in electronics processes and other industries
- Contaminated brazing and tinning baths
- Residues from wave soldering processes
- Jewellery-making waste
- Anode stubs
- Off-cuts from rolled tin-based products
- Waste from car radiator and bearing manufacturing processes
- All metallic waste from pewter ware and electroplating applications

Métaconcept has for many years been committed to introducing environmentally-friendly working practices. We have always operated a proactive policy of minimising end waste levels, not least by supplying non-polluting products such as lead-free alloys, VOC-free solders and water-soluble products, and by recovering the waste produced by our customers. Métaconcept accepts that the products it manufactures will generate waste when used, and shoulders this responsibility by recovering the waste from the products it sells.

To this end, Métaconcept has introduced a service to deal with waste from the moment it is generated right through until it is reprocessed.

WASTE COLLECTION

- Métaconcept supplies waste containers (galvanised steel drums containing approx. 30 Kg) on consignment.
- Collection days and times are agreed
- The drums containing your waste are collected by Métaconcept (via our usual approved transport contractor)

LEGISLATION

Statutory requirements

The French waste disposal and material salvage Act (N° 75-633 of 15 July 1975, Amended) is a complex piece of legislation that assigns collective liability to the various players involved, by obliging (art.2) anyone "producing or holding waste in conditions liable to have harmful effects on the soil, flora and fauna, cause damage to sites or landscapes, pollute the air or water, create noise or odours, or generally harm human health or the environment, shall dispose of said waste or arrange for its disposal in accordance with the provisions of this Act, and in a manner preventing said effects", and by obliging producers, importers and exporters (art.5) to "prove that the nature of the waste created at any stage by the products that they manufacture, import or export allows it to be disposed of in accordance with the provisions set out in article 2".

WASTE CLASSIFICATION (as per European Waste Catalogue)

CODE	Waste type
10 04 00	Wastes from lead thermal metallurgy
10 04 01	Slags from primary and secondary production
10 04 02	Dross and skimmings from primary and secondary production
12 01 00	Wastes from shaping and physical and mechanical surface treatment of metals (forging, welding, pressing, drawing, turning and milling)
12 01 03	Non-ferrous metal filings and turnings
12 01 13	Welding wastes
14 03 00	Wastes from the electronics industry
17 04 00	Metals including their alloys

OUR WASTE RECOVERY DRUMS

↑ Maximum Fill-in level (maxi 30 Kg) ↑

**Tin Scrap
Reclaim Bin**
